

Learning Experience

At UpGrad, we have worked with India's leading academicians, experts and technology professionals to create the most engaging learning environment for you.

Let us hear from Mayank Kumar, CEO and Co-Founder at UpGrad, as he describes the platform and your learning experience for the upcoming weeks and months.

So, to summarise, you should remember the following:

- The program is split into multiple courses, each focusing on a key area in the field of Machine Learning & AI

- Each course is split into modules which are further split into multiple sessions dealing with a specific topic.
- Each course also contains a case study and/or assignment(s) so that you can apply the concepts to a business problem.
- Each session and case study is divided into different pages, each with a different learning objective.
- Each page is a combination of text, video, application questions and assignments that you should go through from top to bottom. You need to complete all the components on the page before moving forward. Assignments and case studies, being longer, can be skipped but remember to submit them before the deadline.
